

## ICU Bridge Type Ceiling Pendant(NEW)

### HFP-C+E(Apart Dry-Wet)(NEW)

The spiral arm bridge in ICU is used in the ICU ward, which is the necessary auxiliary equipment for medical rescue in modern intensive care unit. It is mainly composed of bridge, dry section and wet section form. It is characterized by reasonable structure of dry and wet separation, and flexible lifting and lifting infusion frame and infusion pump frame are equipped in wet section. The dry wet section is equipped with lifting. In the dry and wet sections, oxygen, air, suction, strong and weak current, and network input terminals are respectively configured in the medical staff On the tower within reach of the staff. Cantilever structure is used in wet section to improve the treatment space. Mechanical braking is used to prevent floating in the moving rotating part. Central configuration lighting treatment lamp. It provides lighting solutions for clinical treatment. In addition, communication paging, monitoring, and Video phone, background music, teaching and remote consultation system.
